40

33

AUTEC is a leading manufacturer of wireless control devices with safety functions used to remotely control self-propelled or fixed position operating machines in the construction, steel industries, maintenance and logistics in general. The development and production headquarters are in Vicenza, Italy, 100 km from the Venice airport hub. Other group companies are based in Germany, Spain, South Korea, China, USA, Canada and Brazil and provide technical, logistics and commercial support. AUTEC integrates the management of business processes, especially design and production, based on reliability, sturdiness and safety.

RADIO REMOTE CONTROLS

FOR INDUSTRIAL LIFTING AND AUTOMATION

Remote controls of the AIR Series are ideal for automation, industrial lifting and both operational and selfpropelled machinery.

GENERAL FEATURES

- Connectivity through CANopen, PROFIBUS, PROFINET, EtherCAT®, EtherNet/IP[™] and serial interfaces for the control and communication of data
- Suitable for multiple radiocontrol systems
- System configuration through navigation menu or PC software
- Data logger for recording of radio control operations

 $\begin{array}{l} \mbox{Hamming distance:} \geq 9 \\ \mbox{Typical working range: } 75\text{-}100 \ m \ (240\text{-}330 \ ft) \\ \mbox{Protection degree: } IP65 \\ \mbox{Working temperature range of transmitting units: } (-20^{\circ}\text{C}) \div (+55^{\circ}\text{C}) \ / \ (-4^{\circ}\text{F}) \div (+130^{\circ}\text{F}) \\ \mbox{Working temperature range of receiving units: } (-20^{\circ}\text{C}) \div (+70^{\circ}\text{C}) \ / \ (-4^{\circ}\text{F}) \div (+158^{\circ}\text{F}) \\ \mbox{Storage temperature of transmitting units: } (-40^{\circ}\text{C}) \div (+70^{\circ}\text{C}) \ / \ (-40^{\circ}\text{F}) \div (+158^{\circ}\text{F}) \\ \end{array}$

SAFETY

AUTEC designs and produces industrial remote controls with a level of safety that meets even the strictest of standards. The most important aspects of the remote control (functional, electrical, environmental, radio) reflect state-of-the-art technology for both control and communication. Radio frequency communication is made through a certified and "proprietary Autec" system. Each remote system uses its own unique code which cannot be reproduced.

• **STOP Function** classified **up to PL e**, in accordance with EN ISO 13849-1 and **SIL 3** in accordance with EN IEC 62061.

For some models of the AIR Series it has been certified by TÜV Rheinland.

RADIO COMMUNICATION

The system of data transmission and control is bi-directional, dual-band and is configurable by the user:

- with automatic frequency search at system start-up (434 MHz, 64 channels / 915 MHz, 256 channels);
- with automatic search through FHSS Frequency Hopping Spread Spectrum (870 MHz, 128 channels / 915 MHz, 256 channels).

CONFIGURABILITY

One of the greatest strengths of the AIR Series is its configurability. Each receiver can be paired with any transmitter in the series, according to the needs of the specific applications and radio communication type used. In this way it is possible to adapt to complex working situations, including the use of multiple machines, maintaining both high reliability and safety. Thanks to the wide configurability of available actuators and displays, the transmitting units can adapt to many application requirements. In addition receivers can be configured with optional boards into the expansion slots, that allow to optimize the output interface with respect to the function required by the machine.

MULTIPLE SYSTEMS

AUTEC's AIR Series can also offer solutions for multi-unit systems; that is, for remote systems that involve either more than one receiver or transmitter.

MULTI-TRANSMITTING SYSTEMS

The multi-transmitter (or Take&Release) system consists of several portable transmitting units (up to 15) with which several operators can remotely control the machine, and a receiving unit installed on the machine itself. The receiving unit can be controlled by all the transmitting units, but only one at a time (independently and exclusively).

MULTI-RECEIVING SYSTEMS

A multi-receiving system consists of a portable transmitting unit that the operator can use to control one machine or more, and several receiving units installed on the machines themselves. The number of receiving units depends on the work application where it is used. If the transmitter loses the radio link with even just one of the receiving units, it will stop working with all the others as well.

MULTI-UNIT SYSTEMS

A multi-unit system consists of several portable transmitting units (2 to 4) that several operators can use to remotely control one or more machines and several receiving units (2 to 4) installed on the machines. The receiving units can be controlled by one transmitting unit or more, but only one at a time (independently and exclusively).

HANDHELDS

The AIR Series hand-held transmitters are light, compact and robust solutions, equipped with multi-function pushbuttons and a navigation menu to optimize functionality and settings according to the requested application.

They are available in two versions:

- with internal Li-Ion battery (A4, A6, A8) rechargeable through Docking Station;
- with two extractable external Li-Ion batteries (A4B, A6B, A8B), battery charger and power key switch kit for start-up which comes standard.

In both versions there is an "ID internal tx memory", which contains the unique and univocal address of the radio remote control along with the information that defines its mode of use. They can be combined with any AIR Series receiving unit.

A4 / A4B

search at start-up (434/915 MHz)

LK NEO

LK NEO is a highly configurable pushbutton transmitting unit that can be used for the remote control of tower cranes, overhead cranes, hydraulic machines and countless other mobile applications.

This product open a wide range of functionalities inside the AIR Series technology, thanks to many available options and to a dual band radio with automatic search of free channel in **FHSS** (Frequency Hopping Spread Spectrum) at 870/915 MHz. The **STOP function is classified up to PL e, SIL 3** (according to EN ISO 13849-1/EN IEC 62061). LK NEO has 4 LEDs for visualization of machine status and data logger for recording of remote control operations.

It is available with 6, 8, 10 and 12 pushbuttons. In addition, there are 2 other versions (6 or 10 buttons) with a **customizable 1.8" color display**. This pushbutton can also be used for multiple radio control solutions (multi-transmitters, multi-receivers).

MAIN FEATURES

- Dual-band FHSS Radio with automatic frequency search (870/915 MHz)
- STOP function up to PL e, SIL 3 (according to EN ISO 13849-1/EN IEC 62061)
- Suitable for Multiple Systems
- Work area 100 meters (330 ft)
- Customizable labeling
- Data logger for recording of remote control operations
- Autonomy with full battery at 20°C (68°F):
 >16 h with Li-ion battery without display
 >10 h with Li-ion battery and 1.8" display
 >8 h with NiMH battery

• Pouch with belt

LK NEO EX

The LK NEO EX pushbutton transmitting unit is a product **suitable for use in environments with the risk of explosion**, such as petrochemical or heavy industry.

The transmitter, available with 8 or 12 pushbuttons, **complies with both the ATEX Directive 2014/34/UE (zone 0/20 or zone 2/22) and the IECEx certification scheme (zone 0/20)**. It can be combined with any receiving unit in the AIR Series provided that the receiver is placed outside explosion-risk area. As an alternative, it is possible to supply an ACRM15 receiving unit inside an explosion-proof enclosure.

SIDEKICK

The SIDEKICK transmitting unit is safe, reliable and compact. It was conceived by AUTEC for applications with a limited number of actuators.

The unit has a **dual band radio** with automatic search of free channel in **FHSS** (Frequency Hopping Spread Spectrum) at 870/915 MHz and is very portable thanks to an ergonomic design, extremely reduced weight and an inclined control panel.

The **STOP function is classified up to PL e**, according to EN ISO 13849-1. SIDEKICK has 4 LEDs for visualization of machine status and a data logger for the recording of the commands sequences operated by the remote control. It can also be used for **multiple radio control solutions** (multi-transmitters, multi-receivers).

8 mm (4.65

SK4

MAIN FEATURES

- Dual-band FHSS Radio with automatic frequency search (870/915 MHz)
- STOP function up to PL e, SIL 3 (according to EN ISO 13849-1/EN IEC 62061)
- Sensor that intervenes in case of nonmovement, inclination, impact, bump or fall of the transmitting unit
- 4 data feedback LEDs to display machine status
- Data logger for recording of remote control operations
- PIN start-up: prevents unauthorized use
- CAN communication and serial ports
- ID internal tx memory
- Autonomy with full battery at 20°C (68°F):
 > 16 h with Li-ion battery

STANDARD ACCESSORIES

- Waist Belt
- Cable with USB connector and AC power or car jack, to recharge the Li-Ion internal battery

- Pre-disposition actuator for emergency calls and intermittent brake (for forestry applications)
- Can be used while charging

COMPACT

COMPACT is a portable unit for the remote control of machinery in multiple industries.

With a highly reliable radio link and compliance to functional safety requirements this "compact" belt and harness transmitter is suited for use in demanding environments. Studied with an **ergonomic shape** to prevent involuntary activations and issues due to external interference during operation, its functional-area is optimized for a comfortable and easy access/grip of the actuators on top and sides. The top-frame integrate comfortable rubber handles and a **TFT 2.8" color display**.

In all configurations mechanical and chemical resistance is granted as well as IP65 and 1.5m fall.

AJC

MAIN FEATURES

- Dual-band FHSS Radio with automatic frequency search (870/915 MHz)
- STOP function up to PL e, SIL 3 (according to EN ISO 13849-1/EN IEC 62061)
- Suitable for Multiple Systems
- Removable power keyswitch: magnetic M-Key or Key ID 0-1
- Work area up to 100 meters (330 ft), even with obstacles
- Customizable labeling
- Visualization of machine status with either 4 or 16 LED lights
- Data logger for recording of remote control operations
- Autonomy with full battery at 20°C (68°F): 24 h with Li-ion battery without display 10 h with Li-ion battery and 2.8" display 12 h with NiMH battery

STANDARD ACCESSORIES

- Shoulder strap or waist belt
- Extractable NiMH or Li-Ion battery and charger

- Cable Control
- Zero-G Sensor
- IR Sensor
- External Buzzer
- 2.8'' TFT LCD graphic display (240x320 pixel, 65536 colors)
- 32 LEDs
- Removable Mechanical key

CURVE

CURVE AJQ is a joystick transmitting unit that can house up to 3 multi-axis joysticks. Thanks to the AIR Series technology, it's ideal for the remote control of overhead cranes, boat trailers, compactor presses, gantry cranes and many other applications, in single or multiple-unit configurations.

CURVE has a **FHSS bi-directional radio** with a frequency band of 870 / 915 MHz. A data feedback function provides the user with important machine status information on an **optional customizable 2.8" color TFT LCD graphic display**.

(12.20 in)

MAIN FEATURES

OPTIONAL BOARDS

AirRIR05A / AirDIR05A

- 5 relays, contacts 10A, 250 VAC N.O. / N.C.
- Connector with spring terminals
- AirRIR05A for ACRM15, DCRM24, ACRM5E, MVRL9E
- AirDIR05A for ACRDIN, MVRDIN,

AirRIR08A / AirDIR08A

- 8 relays, 6A contacts, 250 VAC N.O.
- Connector with spring terminals
- AirRIR08A for ACRM15, DCRM24, ACRM5E, MVRL9E
- AirDIR08A for ACRDIN, MVRDIN.

AirRIR08G / AirDIR08G

- 8 relays, contacts for low load switching 1A, 250 VÁC N.O.
- AirRIR08G for ACRM15, DCRM24, ACRM5E, MVRL9E
- AirDIR08G for ACRDIN, MVRDIN,

AirRIV06A / AirDIV06A

- 6 analog outputs voltage (0÷10 V, -10 +10 V) or current-loop (0+20 mÅ)
- Removable memory card for easy replacement Set up of the parameters is remoteprogrammable or through micro SD
- AirRIV06A for ACRM15, DCRM24, ACRM5E, MVRL9E
- AirDIV06A for ACRDIN, MVRDIN.

AirRIC06A / AirDIC06A

- 12 analog outputs PWM (0÷2 A)
- Removable memory card for easy replacement
- Set up of the parameters is remoteprogrammable or through micro SD
- AirRIC06A for ACRM15, DCRM24, ACRM5E, MVRL9E
- AirDIC06A for ACRDIN, MVRDIN,

AirRID06A / AirDID06A

- 6 adjustable analog outputs voltage (0÷28 V) •
- Removable memory card for easy replacement .
- Set up of the parameters is remoteprogrammable or through micro SD AirRID06A for ACRM15, DCRM24, ACRM5E, MVRL9E
- AirDID06A for ACRDIN, MVRDIN,

AirRIAMIA / AirDIAMIA

- 4 analog inputs (0÷10 VDC or 0.20 mA), load cells, pulse counter and RS 232/485 serial interface
- Removable memory card for easy replacement
- Set up of the parameters is remoteprogrammable or through micro SD
- AirRIAMIA for ACRM15, DCRM24, ACRM5E, MVRL9E
- AirDIAMIA for ACRDIN, MVRDIN.

AirRIP01A / AirDIP01A

- Board with variable resistive output $(0 \div 10 \text{ k}\Omega)$
- AirRIP01A for ACRM15, DCRM24, ACRM5E, MVRL9E
- AirDIP01A for ACRDIN, MVRDIN,

AirRISYNA

- Synchro interface board between multi-receivers
- Depending on its programming and the electrical state of the digital inputs of selected receivers, this card can condition the outputs of the receiving units
- Removable memory card for easy replacement
- Set up of the parameters is remoteprogrammable or through micro SD
- For ACRM5E, MVRL9E, ACRDIN, MVRDIN.

AirRIPRFA / AirDIPRFA

- PROFIBUS DP interface board
- AirRIPRFA for ACRM15, DCRM24, ACRM5E, MVRL9E
- AirDIPRFA for ACRDIN, MVRDIN.

AirRICANB / AirDICANB

- CANopen 2.0 A interface board
- Removable memory card for easy replacement Can also be programmed to communicate
- with a customized CANopen AirRICANB for ACRM15, DCRM24, ACRM5E, MVRL9E
- AirDICANB for ACRDIN, MVRDIN,

AirRIPRFN / AirDIPRFN

- . PROFINET IO interface board
- Supports PROFINET-RT and IRT (specific 2.3)
- Supports re-mapping of process data Connection with 2 x RJ45 or 2 x M8 .
- GSD file of device description
- AirRIPRFN for ACRM15, DCRM24, ACRM5E, MVRL9E
- AirDIPRFN for ACRDIN, MVRDIN,

AirRIETHC / AirDIETHC

- EtherCAT interface board (slave interface)
- Supports re-mapping of process data
- Connection with 2 x RJ45 or 2 x M8
- ESI file of device description
- AirRIETHC for ACRM15, DCRM24, ACRM5E, MVRL9E
- AirDIETHC for ACRDIN, MVRDIN.

AirRIETHN / AirDIETHN

- EtherNet/IP[™] interface board (slave interface) Supports re-mapping of process data
- Connection with 2 x RJ45 or 2 x M8
- EDS file of device description AirRIETHN for ACRM15, DCRM24, ACRM5E, MVRL9E
- ٠
- AirDIETHN for ACRDIN, MVRDIN.

70 mm (2.76 in)

INFRARED SYSTEM

Radio communication cannot be limited to specific areas. **The area of use of a remote control can be limited** by installing an infrared system. The main functions that can be combined with this system are:

- start-up of a machine only within the area covered by the sensor (IR START-UP, pic.1)

- start-up of a machine and use of a remote control only within the area covered by the sensor (IR RANGE LIMITING, pic.2)

- enabling of a specific movement (IR COMMAND ENABLE, pic.3)

There are many fields of application, ranging from industrial lifting to automation and mobile machines.

The infrared system is an optional component of the radio remote control, and is made up of two parts:

- a fixed, powered part on the machine, that emits an infrared beam (illuminator)

- a part fitted on the transmitting unit, to capture the infrared beam (sensor).

ZERO-G SENSOR

Zero-G Sensor may act for one or more of the following causes:

- **Impact, thrown, rolling:** Zero-G Sensor activates when the transmitting unit impacts with a movement or in case it is thrown or rolled;
- Fall: Zero-G Sensor activates when the transmitting unit falls from higher than 1 meter;
- Tilt: Zero-G Sensor activates when the transmitting unit is tilted at a defined angle to the ground.

CABLE CONTROL

Cable Control is available as an option. It connects the transmitting unit via cable to the receiving unit by replacing the radioelectric link and it's used:

- in particular working conditions established by the Machine Manufacturer;
- when it is not possible to establish a radio link between radio remote control units;
- when working in environments where using radio frequencies is not allowed or is dangerous;
- when a battery is not available.

ENABLING SWITCH

The "Enabling switch" is used if **all or some of the radio remote control functions need to be enabled**, only if the button is deliberately held in the intermediate position by the operator (pic.2). The protected controls cannot be used via the "Enabling switch" if the button is in the other two positions, i.e. firmly pressed (pic.3) or fully released (pic.1). This allows the operator to **limit the use / functions of the radio controlled machine**. A typical field of use is the world of automation, where the operator has to bypass the guards in order to approach the machine and check it is working properly or make the necessary settings.

ENABLING&STOP

The "Enabling&Stop" is used if **the radio remote control needs to be enabled / started safely**. The radio remote control can only start/control the machine if the relative 3-position button is deliberately held in the intermediate position by the operator (pic.2). If the button is in the other two positions, i.e. firmly pressed (pic.3) or fully released (pic.1), the machine cannot be started/controlled. This allows the operator to **stop the machine** not only when necessary, but also **in conditions of panic, reckless behaviour, voltage, electric shock**. A typical field of use is the world of automation, where the operator has to bypass the guards in order to approach the machine and check it is working properly or make the necessary settings. The "Enabling&Stop" is a safety function that meets the "PL d" requisites of EN ISO 13849-1.
